Archias' Hybrid TOMATOES

Advantages of Hybrid Tomatoes

It has been proven that true hybrids grow faster than open pollinated varieties, produce greater yields, show more vigor, and bear a more uniform product over a longer period of time. It is possible to incorporate into hybrids, disease resistance, the best feature of their parents, and to eliminate many of the bad features. If you want uniform fruit, extra yield, and better quality, we highly recommend the hybrid varieties listed below. The proper use of fertilizer in your soil is essential with hybrids as well as with other varieties.

NEW! HYBRID TOMATO NO. 1

70 days. This is the hybrid that gave our customers so much satisfaction last season. Early midseason hybrid particularly outstanding for the quality and rich flavor of its fruits. It is a great producer, yielding 20% more than Marglobe or Rutgers.

Fruits are medium to large, firm, thick walled, average 8 ozs. in weight, deep globular in shape, scarlet-red in color; flesh is meaty and so rich in flavor that other popular varieties seem flat in comparison. Missouri 148 parentage is similar to Missouri 8; however, in breeding this new hybrid the undesirable features of Missouri 8 have been removed, retaining the good features and many of the good features of U. S. 13 have been added.

A very tall hybrid with deep green foliage. Ears borne high, are long and somewhat tapering. Kernels medium yellow with medium indentation. Resistant to lodging under most conditions. Best adapted to the area south of the Missouri river. No. 148 was near the top in many of the state yield tests.

3 BEST EARLY HYBRIDS

U. S. 35

Matures early. The plants are fairly tall and quite resistant to lodging. The ears are carried relatively high on short shanks, and are easily husked. They are large, thick, carrying deep, medium rough, relatively starchy kernels. It has proved to be excellent for mechanical picking.

U30

The Heavy Yielding Extra Early. Despite its earliness, you can't beat U30 for a heavy yield. It has made over 100 bu. per acre. and some 120 bu. per acre reports have been received. U30 has a very stiff stalk, deep roots, and a large, medium rough single ear. Has medium soft kernels of high feeding value. Kernels deep, cob small. Ears about 2½ ft. from ground.

U36

The All-Around Early. One of the most all-around hybrids of the earlies. Very heavy yielder, good ear size, very deep kernel with small cob and noted everywhere for its exceptional standability—despite high winds. Ears of beautiful Reid-type, cylindrical show ears. Dark green foliage. Is also used heavily for late planting or for early hogging down.

UNITED HYBRID

THE CORN OF PLENTY

"Kernel-Coated" means 10 to 13 extra bushels per acre. Write for special "United Hybrid" Corn catalog.

U47

110 to 115 days. THE LARGE-EAR-ED HYBRID. This is the large-eared hybrid with a Reid-type, cylindrical ear of reddish cast. Exceptionally high feeding quality and shelling percentage and is noted because cattle prefer it. Protein is well balanced to make perfect feeding.

U50

115-120 days. This hybrid is noted not only for its high yield but its vigorous growth and ability to "take it" despite the weather. Stands early cold in the spring, ravages of insects, high winds, drought and still comes through with a heavy crop. Ear height about 3½ ft. Adapted to average soils.

U59

THE WIDELY ADAPTED HYBRID. 120 to 125 days. Adapted over wide area doing best on average soil but performing well on almost all soil types with yields of 120 bushels or more common. Has high lodging resistance, medium large stalk and medium foliage. Ear height regular at 4 ft. Easy to pick, hand or machine.

U67

125 to 130 days. Has an outstanding record for heat and drought resistance and high yield. Dark green leaves and strong stalk. Clean picking and shucking make this variety unsurpassed over a wide area from Eastern Kansas and Central Missouri to Oklahoma and in Arkansas. A long time yield winner in the upper delta. Has a rougher dent than formerly and is a leader in its field.

U68

THE NEW LATE HYBRID. 130 to 135 days. This is United's newest and heaviest yielding of the late hybrids, consistently topping 100 bus. per acre in yields. Very large, medium rough ear. Large thick stock that stands well.

Archias' MISSOURI

MISSOURI STATE CERTIFIED

Reid's Yellow Dent SEED CORN

This is Missouri's best known variety, but all Reid's Dent is by no means equal in production. Many strains have been allowed to deteriorate. Painsstaking selection and constant supervision has made this strain "tops" for Reid's Yellow Dent. The average maturity is 110 days. Ears 9 to 13 inches long—well filled out from tip to butt with deep, close set grains—Order early! The supply of this fine seed is limited. **Price by mail, postpaid: 1 lb., 25c; 5 lbs., 60c. A quick growing yellow variety, highly desirable and popular with feeders who want an early feeding Corn. Matures in about 90 days. Archias' 90-Day Yellow ears are about 10 inches long, sometimes two to the stalk; deep, moderately rough kernels high in protein and oil content make it an excellent feeding Corn. **Price by mail, postpaid: 1 lb., 25c; 5 lbs., 60c. Two Early Funk's Varieties

FUNK'S G-29

This is an early hybrid that enjoys great popularity in the Central Corn belt. We do not recommend it for maximum yields but it will make a good Corn crop under our range of soils and conditions. Limited quantities of G-29 are available for late planting or replant, for an early feed supply or a cash crop to be removed in time for fall seedings. Stands well and harvests easily. Ears, while smaller than full season G-Hybrids, are remarkable size for a short season Corn and excellent feeding quality.

FUNK'S HYBRID G-53

Early in maturity, single eared yellow variety. Is suited for late planting over Kansas and Missouri. Best suited to good fertility, it also gives a good account of itself on average fields.

A favorite with feeders, G-53 has a dimple dent and is the softest Corn we produce with high marketable and feeding value. Medium-height Corn bears a single ear, medium low on the stalk. Stands up and holds the ear on the stalk and picks easily. Chinch bug, root worm, cold, heat and drought resistant.

FUNK'S HYBRID G-94

Medium to full season in maturity, this single-eared yellow hybrid has enjoyed an outstanding record through Northern and Central Missouri, and Kansas. Has the highest 2-year record in Kansas test—69.29 bushels in the Northwestern section. Is in the top two in Northern Missouri 2-year averages and in 1940 placed in the top group in both Central and Northern Missouri.

Leafy, dark green; grows to medium height, and stands up exceptionally well, surviving chinch bug and root worm attacks. Resistant to grasshoppers, heat, drought and Stewart's Disease. Its cold resistance allows it to be planted early, giving time to mature the large single ears of exceptional grain quality.

FUNK'S G-80

Full season in maturity (about one week later than G-94), a single eared yellow variety.

G-80 is a new, rapid growing, high yielding hybrid that has unusual stalk qualities enabling it to stand up even when storms level other Corns. This hybrid has demonstrated its ability to withstand wind, drought, chinch bugs, Stewart's Disease and ear worms. It will deliver a rich golden harvest of excellent feeding quality, good deep kernel Corn on soils of varying fertility levels. A winner in state yield tests and private trials; it is the answer to many of the Corn growers' problems in Central and South Missouri and Kansas.

FUNK'S WHITE HYBRID

Medium to full season. A rapid growing, new white development which has yielded right up with yellow hybrids throughout our territory. Single ears.

FUNK'S G-711

Bred for the Southwest

Here is a hybrid built from Southwestern germ-plasm that has the ability to withstand adversities of southern Missouri and southern Kansas. Developed for even tougher conditions, G-711 has rapid early growth, enabling it to get started and well rooted before drought. Tall, heavy dark green foliage and broad leaves resist summer conditions and it continues its growth to mature as a full season Corn. Has a fine record on soils of all fertilities and produces an excellent grain yield. G-711 produces ears of broad-kernel type, heavy and sound. G-711 has made a record for itself on the thinner soils of Pettis Co. this past season.

"Missouri Grown" TIMOTHY

Located as we are in the heart of Missouri's greatest Timothy-producing section, we have a better opportunity to get the best seed harvested. Our machinery is built to thoroughly reclean and efficiently handle the seed in large quantities. These factors combine to make our prices lowest and quality highest. Sow 12 to 15 lbs. to the acre, or 10 lbs. Timothy with 6 lbs. Red Clover or 5 lbs. Alsike Clover. See our Red List for current prices.

KOREAN LESPEDEZA

KOREAN LESPEDEZA. America's Greatest Legume. Adapted to any soil. Makes crop of hay or seed same year sown. Reseeds itself each year, unexcelled for pasture, hay or soil building. Drought resistant. Height 15 to 24 inches. 10 pounds per acre will produce a heavy crop of hay the second year, but 15 to 20 pounds will secure a full crop of seed for harvest the first year. Our stock is of the highest quality and will give satisfaction. See Red List for quantity prices.

LESPEDEZA SERICEA. New perennial Lespedeza. An Oriental perennial legume; grows on poor land, acid or sour soil as well as on rich soil. Great drought resister with an enormous root system. Enriches the soil, starts growth early in spring and gives at least three cuttings a season with as high as three tons of hay per acre from a single cutting. Plant very shallow in 3 1/2 ft. rows on a well prepared bed, in late spring, 3 to 4 lbs. per acre. 5 lbs., \$2.00; 10 lbs., \$3.25, postpaid.

EARLY LESPEDEZA. (U.S.D.A. No. 19604.) Earlier and Heavier Yield. New early Lespedeza—averages 6 inches taller, much earlier, and heavier yielding than common strains, making it ideal for folks who want a taller and earlier type and who have not had success with ordinary Lespedeza. Grows anywhere—especially valued where other legumes will not grow. Will grow on the sourest soil and will build it up by adding nitrogen. Seed is short—order early. Plant same as Korean Lespedeza.

See Field Seed Price List for quantity prices.

SOY BEANS

For hay or oil processing. See Red List for varieties and prices.

BIRDSFOOT TREFOIL

Especially valuable in permanent pastures. We offer only the broad leaf variety which is recommended for this section. See Field Seed price list for prices.

DWARF ESSEX RAPE

Reduces pork production costs. Enormous producer; grows quick. Hog and sheep raisers plant plenty of Rape for pasture. Sow 6 to 8 pounds per acre. Pasture 6 to 8 weeks after seeding. BROME GRASS

"THE MIRACLE DROUGHT RESISTER"

Sow 20 lbs. per acre.

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so it cannot poison the stock. Sow either fall or spring using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Achenbach (Southern Strain), Native Kansas Strain; 10 lbs \$4.50, postpaid. See Field Seed List for quantity prices.

ALFALFA

Archias' northern and native grown Alfalfa deserves to rank first among legumes. Extremely deep rooted, withstands drought as well as severe winters. It furnishes more green foliage, more pasture and dry hay per acre than any known variety of hay or grass. Plant Adapted Seed—approved for AAA payments, save money and get dependable seed by buying your Alfalfa from Archias.

"Sure Brand" Kansas Grown.

"Sure Brand" Nebraska Grown.

"Sure Brand" Minnesota Grown.

"Sure Brand" Genuine Grimm.

GERMAN MILLET

Sow 30 to 40 pounds to the acre

ARCHIAS' GOLDEN or GERMAN MILLET. It is sown in the spring, and after harvesting leaves the ground in the finest condition for Wheat.

PROSO MILLET. Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast.

ALTA FESCUE Considered Better Than Kentucky 31

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator.

Alta Fescue produces as much or more fall and winter foliage as other grasses adapted solely to those seasons. Produces more summer foliage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasturing. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices.

Quality SWEET CLOVER

Good high quality Sweet Clover seed is in very short supply this year. Seed production has been the smallest in years. Much seed that ordinarily comes from Kansas was badly damaged or not harvested at all. We have been very fortunate in securing some "Premium" quality lots of Sweet Clover seed, that has been properly cured, re-cleaned, and scarified, germination is high. We urge you to place your order as early as possible for Sweet Clover as supplies will not be near enough to supply all of the folks that will want it this year.

MADRID

New Biennial
YELLOW

Madrid, the new biennial yellow Sweet Clover is extremely scarce this year. We have less than 100 bags of "Blue Tag" state Certified seed. When this is gone, we are confident that we will not be able to purchase more. Madrid has many characteristics that makes it more valuable than the regular yellow type and we hope that you will send us your order early so that you can have some of this fine variety before it is all sold. See our field seed price list which came with this catalog for prices.

HUBAM

Wonderful
ANNUAL WHITE

This is a great white Sweet Clover that makes its full growth in one season. Hubam can be used as a hay crop, being high in feeding value with protein analysis practically equalling that of Alfalfa. Hubam makes an excellent pasture. You could produce a seed crop from Hubam the first year. It can be used to build up your soil fertility in a hurry. If you need a one year rotation, Hubam will supply the green manure to turn under. Hubam can be sown with smaller grain. We suggest sowing at the rate of 12 to 15 pounds to the acre. Be sure to inoculate. See the price list which came with this catalog for prices.

Sweet Clover

Biennial

White Blossom

Because of weather conditions at harvesting time last season, biennial White Blossom type Sweet Clover of **high quality** is in short supply. This means that there will be many lots of poor quality, low germination seed on the market. We have a very fine lot of "Premium" quality seed that we know will please you. See the field seed price list which came with this catalog for price.

Sweet Clover

Biennial

Yellow Blossom

Yellow Blossom type Sweet Clover is becoming more popular in our section, particularly for use on soil where Sweet Clover grows very tall and rank. Under such conditions or when a leafier and earlier maturing strain is wanted, the Yellow type is the best to plant. It is finer stemmed than the common, matures about 8 to 10 days earlier, is much preferred in mixtures with grasses and other clovers. We have some "Premium" quality seed, the finest that we have ever handled and you will find the price lower than the White Blossom type. See our field seed price list which came with this catalog for prices.

NEW! "Certified" Blue Tag

MIDLAND Red Clover

The U.S. Department of Agriculture in co-operation with the State Experiment Stations have developed a new Red Clover known as Midland Clover. This variety has been bred to give higher yields, to increase nitrogen production, and for greater disease resistance. Midland Clover has been produced especially for the mid-section of the United States. Tests have shown that it will produce a quarter of a ton to one ton more hay per acre than ordinary medium Red Clover. It is also resistant to Northern anthracnose. The supply of Midland Clover is still short but we have a nice lot of "Blue Tag" State Certified seed for early orders.

Broadleaf

BIRDSFOOT TREFOIL

This deep-rooted legume has been known as poor land Alfalfa as it will grow on poor soil, on dry soil or wet. Birdsfoot Trefoil has an excellent root system. The stems are quite fine and resembles in many ways Alfalfa. It is resistant against drought and stands Summer heat well. It is generally grown in mixtures such as Orchard Grass, Timothy or Blue Grass. We offer only the Broadleaf variety, which is the superior variety for this section. See the field seed price list which came with catalog for prices.

Plant The New Varieties for Greater Profits!

Mo. State "Certified" Early **LESPEDeza**

Has Been
Known as
"EARLY GIANT"

Averages 6 inches Taller — Early Maturing — Heavy Yielding Drought Resistant

"Certified" EARLY 19604 LESPEDeza

Is becoming more and more of vital importance. Farmers are realizing what it is doing and the acreage is expanding fast. One of our certified growers tells us that no farmer should be without at least a few acres of early Lespedeza. During hot summer months when many pasture crops are dormant, this crop is beautiful dark green and making its best growth. It has a great producing capacity at the time of the year you need it most. It provides an abundance of high protein feed and enriches the land like other legumes.

Another big feature about early 19604 is that your seeding makes an early start and grows more vigorously than ordinary Korean. The seed is mature, ahead of regular Korean, giving it an opportunity to reseed itself and for the harvest of a seed crop, where often times Korean is caught by unfavorable weather.

"CERTIFIED SEED"—We have a very limited amount of Missouri State Certified seed. While priced a little higher than non-certified, we believe that you will find it better and certainly more desirable, if you are going to harvest your crop for seed another season. Send your order early while we can supply you.

PRICE—50 lbs. \$8.95

(See Field Seed List that came with this catalog for quantity prices)

"Non-Certified" EARLY 19604 LESPEDeza

We have a number of farmers who produce Early 19604 Lespedeza Seed, "non-certified," exclusively for us. These fields were planted from certified seed. The seed crops are harvested early and the seed is cleaned in our own mills. We have large quantities of non-certified seed even though the supply of Early Lespedeza is short this year. We believe that you will be well satisfied with our "non-certified" seed. We pride ourselves in our cleaning and believe that we do as good a job as can be done. See the field seed price list which came with this catalog for prices.

PRICE—50 lbs. \$6.75

IOWA 6

NEW WILT-RESISTANT
EARLY LESPEDeza

The newest introduction in wilt-resistant, early Lespedeza, Iowa 6 was the most satisfactory Lespedeza grown by any of our seed growers last Summer. One of our growers harvested over 800 pounds of clean seed to the acre on a 10 acre plot. Like Early 19604 matures seed some two weeks ahead of regular Korean. It starts off very quickly in the Spring and apparently free from bacteria wilt and we find it grows as tall as any of the early Lespedeza varieties. Be one of the first to grow Iowa 6 in your territory. Have seed of this variety to sell now while you can get a premium for it. Our supply of seed is very limited. We are going to fill all orders as fast as they are received. First come, first served.

PRICE—50 lbs. \$9.95—See price list for quantity prices

NEW! Early VARIETY Lespedeza Iowa 81

We offer a very limited quantity of "State Certified" seed of this new early variety Iowa-81. Iowa-81 originated in Iowa, as a wilt resistant selection of 19604. The field from which our seed originates has been watched very closely. We have found it free from bacterial wilt. Our observation also reveals a stem and leaf of finer growth. It grows equally as tall as 19604, if not slightly taller which should make it even more desirable for hay than its original parent. We know that there is not sufficient seed available for everyone to try this variety, but as long as it lasts, we will fill your order promptly—order early!

We clean our "Sure Brand" Lespedeza to better than 99% pure. Most lots run as high as 99.50% and 99.75% pure. We believe you will find our Lespedeza priced right for quality seed. Sericea Lespedeza

PERENNIAL
VARIETY

This is a perennial strain of Lespedeza. This means that once established it starts from the roots each Spring. The first year of growth is often slow but after it is once established it starts out very early in the Spring. It grows much taller than Korean, has a greater root system, and very superior as a soil builder. We have found it extremely hardy in this climate. To get a good stand, we believe the seed should be covered. We believe you would like to have at least a part of your acreage in Sericea.

"State Certified" **BROME GRASS**

Genuine Achenbach Strain—Kansas Grown

True Achenbach Brome is very scarce this year. Very little seed was harvested in Kansas. We were very fortunate in purchasing a fine quantity of Certified "Blue Tag" genuine Achenbach Brome. Enough to supply our regular trade, providing we have your order early. Achenbach is the Southern strain which is the most satisfactory for Missouri, Kansas, Oklahoma, and Arkansas. We have priced this seed at not more than others are asking for Northern grown seed. We can also supply a limited quantity of non-certified Achenbach, Kansas grown. You will find both of these lots of seed priced on the field seed price list that came with this catalog. Be sure and order early while we can supply GENUINE ACHENBACH.

New Varieties **SEED OATS**

MINDO Early Maturing — Combine Type "State Certified"

There has been a great many new varieties of Oats developed during the past few years. These are produced by crossing the different good disease resistant varieties. Mindo has been developed by the State of Minnesota. It has proven extremely satisfactory in Missouri, being considerably earlier than Columbia. The straw is very stiff, combines nicely, and yields in our seed fields were equally as good as other varieties. See the field seed price list which came with this catalog for prices.

CLINTON "State Certified"

Clinton Oats are becoming very popular in this territory. We sold several thousand bushels last season. Being unusually resistant to Helminthosporium blight, it has a very strong straw, stands up even after the crop has ripened. They may be left to fully mature for combining. Clinton is about a week earlier than Columbia and about a week later than Cherokee and Mindo. Our Clintons are State Certified, come to you with Blue Tags. We are pricing them very reasonable this year. Look on the field seed price list which comes with this catalog for price.

CHEROKEE

Cherokee is one of the best crosses that has been made to date. The Cherokee is a selection from the same cross as the Clinton Oat. There is, however, quite a difference between them. Difference in appearance, in habit of growth, and size of grain. Cherokee is a little more plump, more compact, straw is shorter than Clintons, maybe not as strong but stands up well. The early maturity of Cherokee is an important factor for this section. We hope that you will plant this new variety. You will find the price of Cherokee on the field seed price list which came with this catalog.

ALTA and KENTUCKY "31" FESCUE

These two new Fescues are creating quite a sensation all over the country. Both are improved strains of tall Fescue. They are deep rooted, tufted, long lived perennial grasses, especially desirable for pasture because of their unusually long growing season. In the Southern sections, these Fescues will stay green practically all Winter, will thrive in many types of soil, will withstand poor drainage conditions. You will find a mixture of Ladino Clover, Alsike or mixed with Birdsfoot Trefoil excellent for both pasture and hay. Experiments have shown that there is practically no difference between Alta and Kentucky "31" except the price. We have both to offer you. Our seed is "Blue Tag" State Certified. You will find the prices on the field seed price list which came with this catalog.

LADINO CLOVER

New! Giant White Dutch

We can supply "Blue Tag" Certified Ladino this season. The demand for this giant clover has been so heavy the last two or three years that it has been difficult to secure sufficient seed for everyone. Everyone knows what White Dutch Clover is. Ladino is a giant strain producing succulent leafy stems of high feeding value, 12 to 15 inches high, depending on soil and moisture conditions. It produces a pasture that is excellent for all kinds of livestock, especially dairy cattle and poultry. High in protein and especially valuable in combination with other grasses in pasture. Ladino is widely adapted and especially recommended for wet land but prefers soil that retains moisture fairly well. An application of phosphate fertilizer is helpful. Sow 1 to 3 pounds to the acre, only 1 pound in mixtures. See the field seed price list for prices.

Pasture Mixture No. 3 Timothy, Ladino and Red Top

Ladino Clover is the newest sensation in clovers today, being extremely productive and widely adapted. It fits in wonderfully for pasture. We have made a special mixture consisting of Timothy, Ladino, and Red Top properly proportioned. This mixture is priced at less than what you would pay for the same quality of seed purchased individually. This will come to you already mixed. We believe that you will find this mixture a great boost for your pasture. See the field seed price list for prices.

Ladino White Clover

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Meadow Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs alone in early spring or fall.

"Certified" Sweet Sudan Grass

SWEET SUDAN is a greatly improved Sudan Grass from a hybridization of Leota Red Sorghum on common Sudan. It has great palatability, livestock eating it to the ground before touching common Sudan or other forage Sorghums. SWEET SUDAN has broader leaves, larger stems and makes taller growth, stooling heavier than common Sudan. It is a truly great improvement over common Sudan, and in our opinion will completely replace common Sudan in a few years. We recommend that every farmer put in at least a part of his Sudan acreage with SWEET SUDAN to prove to himself the many advantages for both hay and grazing over common Sudan. Not recommended for pasture in sections where Sudan will sunburn as Sweet Sudan is a cross with Leota Cane.

See Price List for quantity prices.

"Certified" Sudan Grass

Sudan Grass is primarily a hay grass, its slender leafy stems making it easy to handle with ordinary haying machinery. It makes its greatest growth and produces the most feed during July, August and September, when native grasses are less productive. It can be grown successfully on almost every class of soil from a heavy clay to a light sand, besides being particularly drought and heat resistant. Primarily an excellent hay crop. Sudan is gaining in popularity as a summer pasture. Ready to cut in 45 days. Sow after the ground becomes thoroughly warm, preferably broadcast at the rate of 20 to 25 pounds per acre. A grain drill may be used, set to sow two pecks of Wheat. Cut when in bloom, for at that stage the feeding value is highest.

See Price List for quantity prices.

Permanent Pasture Mixtures

ESTER TYPES

Agricultural WEED-NO-MORE

Is the original Butyl Ester of 2, 4-D. 2, 4-D in its most effective form. Agricultural Weed-No-More was developed especially for killing weeds on farmlands and other large areas. A liquid concentrate, which mixes readily with water or oil, it kills or controls many troublesome weeds. Used according to directions, Agricultural Weed-No-More will not harm Corn, Wheat, Oats, Rye, Barley, Flax, Sorghum, Sugar Cane, Rice and most all grasses.

Agricultural Weed-No-More kills weeds, not by "chemical burn," but by "hormone" action. This upsets the weeds' normal life processes to such an extent that the weed plant slowly but surely dies, usually roots and all.

LIME FOR LAWNS AND GARDENS

This is an excellent tonic—sweetens the soil, stimulates growth, deepens color, improves quality, releases nitrogen for plant food and aids blooming. Flowers in pots, boxes or in the garden, vegetables and also fruit and ornamental trees and shrubs show marked increase in growth and beauty by a liberal application of lime. Apply about 1/2 lb. to 1 square yard of surface and rake in gently. This should be done before planting or after plants are several inches high. Lawns are particularly benefited by the application of lime—do not confuse this special lime with hydrated or whitewash lime, which will burn vegetation. F.o.b. Sedalia.

When Zotox is applied in the minimum solution it kills crab grass without destroying permanent lawn grasses. The selective action is attributed to the fact that crab grass has broader leaves and absorbs more of the chemical than do the narrow-leaved turf grasses. Being a shallow-rooted annual also makes crab grass less resistant to Zotox than are the deep-rooted perennial grasses. Zotox is sold in four convenient sizes.

An 8-oz bottle treats 1000 to 2000 square feet.

256 Pages

By Llewellyn George

Well known Author and Lecturer

The Moon Sign Book gives complete instructions in the use of planetary influence on planting and harvesting, also business and personal affairs, etc., the result of more than thirty-five years of research. Why do farmers plant Potatoes in the dark of the moon? When should Corn, Beans, etc., be planted? Why florists plant seeds in the 2nd quarter and a certain Moon Sign? Why you should plant flowers in Libra on a certain date and Moon's phase? These and many other questions are answered and explained in a simplified yet scientific manner. The Moon Sign Book has been published annually for over 37 years with sales increasing each year. A mine of useful information. Price \$1.00 in the U. S.
